

---

**Algorithm 1** Generalized tensor response regression with covariates on multiple modes

---

**Input:** Response tensor  $\mathcal{Y} \in \mathbb{R}^{d_1 \times \cdots \times d_K}$ , covariate matrices  $\mathbf{X}_k \in \mathbb{R}^{d_k \times p_k}$  for  $k = 1, \dots, K$ , target Tucker rank  $\mathbf{r} = (r_1, \dots, r_K)$ , link function  $f$ , maximum norm bound  $\alpha$

**Output:** Low-rank estimation for the coefficient tensor  $\mathcal{B} \in \mathbb{R}^{p_1 \times \cdots \times p_K}$ .

- 1: Calculate  $\check{\mathcal{B}} = \mathcal{Y} \times_1 [(\mathbf{X}_1^T \mathbf{X}_1)^{-1} \mathbf{X}_1^T] \times_2 \cdots \times_K [(\mathbf{X}_K^T \mathbf{X}_K)^{-1} \mathbf{X}_K^T]$ .
  - 2: Initialize the iteration index  $t = 0$ . Initialize the core tensor  $\mathcal{C}^{(0)}$  and factor matrices  $\mathbf{M}_k^{(0)} \in \mathbb{R}^{p_k \times r_k}$  via rank- $\mathbf{r}$  Tucker approximation of  $\check{\mathcal{B}}$ , in the least-square sense.
  - 3: **while** the relative increase in objective function  $\mathcal{L}_{\mathcal{Y}}(\mathcal{B})$  is less than the tolerance **do**
  - 4:     Update iteration index  $t \leftarrow t + 1$ .
  - 5:     **for**  $k = 1$  to  $K$  **do**
  - 6:         Obtain the factor matrix  $\tilde{\mathbf{M}}_k^{(t+1)} \in \mathbb{R}^{p_k \times r_k}$  by a GLM with link function  $f$ .
  - 7:         Perform QR factorization on  $\tilde{\mathbf{M}}_k^{(t+1)} = \mathbf{Q}\mathbf{R}$ , where  $\mathbf{Q} \in \mathbb{R}^{p_k \times r_k}$  has orthogonal columns.
  - 8:         Update  $\mathbf{M}_k^{(t+1)} \leftarrow \mathbf{Q}$  and core tensor  $\mathcal{C}^{(t+1)} \leftarrow \mathcal{C}^{(t+1)} \times_k \mathbf{R}$ .
  - 9:     **end for**
  - 10:     Obtain the core tensor  $\mathcal{C}^{(t+1)} \in \mathbb{R}^{r_1 \times \cdots \times r_K}$  by solving a GLM with  $\text{vec}(\mathcal{Y})$  as response,  $\otimes_{k=1}^K [\mathbf{X}_k \mathbf{M}_k^{(t)}]$  as covariates, and  $f$  as link function. Here  $\otimes$  denotes the kronecker product of matrices.
  - 11:     Rescale the core tensor subject to the maximum norm constraint.
  - 12:     Update  $\mathcal{B}^{(t+1)} \leftarrow \mathcal{C}^{(t+1)} \times_1 \mathbf{M}_1^{(t+1)} \times_2 \cdots \times_K \mathbf{M}_K^{(t+1)}$ .
  - 13: **end while**
-
